<u>Quick Start Guide :</u>

Adding the "Operations" tab to the main **PanelPro** menu-bar

This step-by-step guide should only need to be used once, after which, the "Operations" tab will display in the main menu-bar of the **PanelPro** start-up window. This will allow the user to more quickly access the 6 main functions of "Operations".

Step-by-step "How-To":

1. Open **PanelPro**, if not already open.
2. Set Active Profile (the profile for which you intend to use "<u>Operations</u>**").
   a. Click "OK".
3. Select **Tools-->Operations-->Settings** from the menu drop-down.
   a. Under the "Options" section, check the box labeled "Add Operations Menu to Main Menu" box.
   b. Click "Save".
4. Close the **Settings** window.
5. Quit **PanelPro**.
6. ReOpen **PanelPro.**

Upon completion of this task, the "Operations" menu choice should be displayed between "Panels" and "Debug" on the main menu-bar.

All these quick-start guides are intended for use with OperationsPro, a stand-alone application accessed from within PanelPro. The use of any other PanelPro functions (such as creating a panel) is NOT required.
